

T6_37 INTERACTIVITY IN A REMOTE LABORATORY

Lucia Amoros Poveda, *McLuhan European Network (MPTC), University of Toronto, Canada and CEMTI Collaborator, University of Paris, France* (lamoros@um.es)

Ernesto Martin Rodriguez, Jose Miguel Zamorro Minguell, Miguel Celdran, *Physics Department, University of Murcia, Murcia, Spain and CoLos Group members* (ernesto@um.es)

CoLoS stands for Conceptual Learning of Science. CoLoS is an association of research teams from many Universities that aims to promote the development of innovative teaching methods in science and technology, and is characterized by a focus on: A) learning and understanding fundamental concepts in science; B) the integration of qualitative and intuitive understanding with quantitative methods; C) the use of simulation and network-based material. In order to attend the actual society based on ICT, cultural considerations must be studied. This paper offers a description of activities useful inside an intercultural young group in a training period. Remembering the sentences "learning playing" and "enjoying yourself", finally it offers possibilities to work inside a remote laboratory, where interactions must be necessary.
